Guide to inserting database data into the front end

There are four types of data you may be looking to insert into your react page: pictures, descriptions, contact information and specialities.

To access any of these, you will need to replicate the exact spelling and capitalisation provided here. For photos, use one of the following names: ChaoWei.jpg, Mengyan.jpg, Mustafa.jpg, Ron.jpg, Xu.jpg. For any other information use one of the following: Chao-Wei, Ron, Mustafa, Xu or Mengyan.

Pictures -

```
<Profile img = "/image/Xu.jpg" clientname = "Xu Han" />
```

The code required to insert an image is demonstrated above. The text in green should be the same for every image while the code in red must be changed. Here, the image we are accessing is called Xu.jpg, and the name which will be displayed on the website is Xu Han.

Descriptions -

```
<UserInfo clientname = "Ron" type = "description"/>
```

This will output something of the format -
Postgraduate student in cyber security. Interested in pentesting.

Contact information -

```
<UserInfo clientname = "Xu" type = "email"/>
```

This will output something of the format -
xhha@student.unimelb.edu.au

Speciality -

```
<UserInfo clientname = "Xu" type = "skills"/>
```

This will output something of the format -

AI
